

How to Use Compost

Compost applied to soil promotes healthy plant growth that removes emissions from the air.

Compost is vital for soil to retain water, prevent erosion and store carbon in the soil where it is a benefit.

Where to use **COMPOST**:

Add compost to potted plants

Repeatedly top dress garden over the seasons

Mix compost in planter beds and pots

For new plants add 50/50 compost to native soil

Make compost tea for a boost of nutrients

Spread ½" of compost on the lawn for growth and to retain moisture
